My Dream Job: Software Engineer

Hello everyone!

My name is Chheng Phana Today, I would like to talk about my dream job.

I have always been interested in technology and computers since I was young. That is why my dream job is to become a software engineer. In this video, I will tell you why I want this job and what I plan to do to achieve it.

First, I want to become a software engineer because I have a strong passion for technology. Ever since I was young, I have enjoyed using computers, playing with different programs, and exploring how websites and mobile applications work. I find it exciting to see how technology can solve real-world problems and make life easier. This interest has grown over the years and made me curious about how software is built and how it functions behind the scenes.

Next, I plan to study computer science at university so I can learn the skills needed to become a professional software engineer. I want to understand programming languages such as Python, Java, or JavaScript, and learn how to build useful applications. I know that writing code is not always easy, but I am ready to work hard and practice a lot. Studying computer science will also teach me how to think logically and solve problems effectively, which are important skills for this career.

Then, I hope to work at a large and innovative technology company like Google, Microsoft, or Apple. Working in such a place will give me the opportunity to learn from experienced engineers and work on big projects that have a real impact on people's lives. I want to be part of a team that creates software to help people communicate, learn, work, or even get healthcare more easily. I believe that technology can be used to improve society, and I want to contribute to that mission.

Finally, I dream of creating my own software or application one day. I would love to start my own tech company or create an app that helps students study more effectively, especially in developing countries. I want to use my creativity, knowledge, and experience to build something meaningful. Becoming a software engineer is not just about making money - for me, it's about using technology to bring positive change to the world and help others live better lives.
